PROFILE

Systems Engineering and Computing student (UPSJB, Ica) and software developer specializing in **Java and its ecosystem**: backend services with Spring Boot, REST API design and implementation, and relational databases (PostgreSQL, MySQL, MariaDB). I have shipped real products to production: an educational platform with 31+ interactive simulators, Java desktop applications, an inventory API, and an open-source file manager written in Rust. I run my own self-hosted server (SahaCloud) with Dockerized services behind a reverse proxy and Cloudflare Tunnels. CITI-certified in AI ethics and responsible conduct of research. In parallel, I am training in Data Science and AI through a structured self-study roadmap — my long-term direction, with public progress on GitHub.

EXPERIENCE

Lead Full-Stack Developer & UI Designer — *SahaHacking* | May 2025 – Present
sahahacking.sahacloud.dpdns.org

- Led the development of a virtual laboratory with **31+ interactive physics and math simulators**, used as the core educational resource.
- Architected and implemented the platform's key features: secure authentication (OAuth/JWT), real-time chat, and dynamic multimedia resource management.
- Designed a responsive UI/UX optimized for real-time scientific simulations.
- Led a multidisciplinary team at UPSJB, integrating AI into the development workflow to accelerate delivery and improve code quality. Platform self-hosted in production on my own server.

Founder & Lead Developer — Open Source — *SahaHacking Org* | *Open-SahaDisk* 2026 – Present

- Created **Open-SahaDisk**, a cross-platform terminal file manager and disk-usage analyzer written in **Rust** (MIT license): safe-by-default file operations with pre-flight risk assessment, background folder sizing, an integrated Docker manager (containers, volumes, Compose), and a cleanup engine with diagnostics.
- Shipped as a single binary with zero runtime dependencies; the first open-source release of the SahaHacking organization.

Homelab & Self-Hosted Infrastructure — *SahaCloud* | *sahacloud.dpdns.org* 2026 – Present

- Designed, deployed, and maintain a personal Ubuntu Server running **~25 Docker containers** behind a Caddy reverse proxy and Cloudflare Tunnels: Nextcloud, Mattermost, Outline, code-server, n8n, Home Assistant, SearXNG, and more, across 12+ subdomains.
- Built **SahaTools**, an operations console (FastAPI + Docker) for live monitoring of every service in the self-hosted ecosystem.

Frontend Developer (Freelance) — *JVLEDIC ELECTRIC S.A.C* | *jvledic.com* 2025

- Corporate website in production for a Peruvian ed-tech company: services catalog (educational robotics, AI and programming courses, STEAM programs), official distributor showcase (DOBOT, Makeblock, Elecrow), blog, quotation flows, and certifications pages. Fully responsive frontend.

- Developed **SahaNotes**, a Java desktop notepad with Markdown support, live rendering, and local file persistence; and **SahaCalc**, a desktop calculator with a built-in function graphing tool.
- Created automation scripts in Bash, Python, and Nushell for SFTP/SSH workflows and daily tasks in Linux environments.

Web Developer (Freelance) — *Personal Projects*

2024 – 2025

- Designed and implemented dynamic web applications with JavaScript, PHP, and TypeScript, including a freelance website with a PHP backend: validated contact forms and automated email delivery via PHPMailer.
- Developed inventory systems and APIs, managing relational databases with MySQL and MariaDB.

Interuniversity Finalist — Innovation Challenge 2026 — *Team UPSJB, Arequipa, Peru* Jun 2026

- Represented UPSJB with the team "Digital platform for the optimization of the traffic-ticket installment process," reaching the interuniversity final.

EDUCATION

B.S. in Systems Engineering and Computing — *Universidad Privada San Juan Bautista (UPSJB), Ica, Peru* Mar 2025 – Present

Comprehensive training with emphasis on object-oriented programming, architecture and technology infrastructure management, databases, networking, artificial intelligence, and information security. Currently in the 4th semester.

Self-Directed Training in Data Science & AI in progress — *Structured 4-stage roadmap* Jul 2026 – Ongoing

Self-study program running in parallel with university (Kaggle, freeCodeCamp, Coursera, Hugging Face, Karpathy's Zero to Hero): Python, Pandas, SQL, statistics, and classical machine learning. First project in development: a complete EDA and modeling workflow (Logistic Regression vs. Random Forest) on Kaggle's Titanic competition. Long-term training direction; public progress on GitHub.

SKILLS

Java & Spring Boot — my specialty.

Backend services, REST API design and implementation, OOP, algorithms, Maven, and desktop applications.

SQL Databases.

PostgreSQL, MySQL, and MariaDB: schema design, queries, and integration with backend services and APIs.

Full-Stack Web.

JavaScript, TypeScript, PHP, HTML/CSS. Authentication (OAuth/JWT), real-time chat, and resource management in production platforms.

Linux, Servers & Self-Hosting.

Ubuntu Server, Docker, Caddy reverse proxy, Cloudflare Tunnels, Tailscale, Bash/Nushell automation, and basic server administration.

Rust & Open Source.

Open-SahaDisk (SahaHacking org): TUI with ratatui, background scanning, Docker integration, and defensive-by-default design. MIT licensed.

Data & AI — in training.

Python, Pandas, and statistics through a structured roadmap (Kaggle, freeCodeCamp). Training in progress, with public progress on GitHub.

Technical Support & Hardware.

PC maintenance and diagnostics, system optimization, Tinkercad.

Design & Multimedia.

UI/UX, Affinity, Krita, Aseprite, Canva, and audio production (Ableton Live).

Soft Skills.

Multidisciplinary team leadership, clear technical communication with clients, self-directed learning, adaptability across stacks, and full ownership of what I build.

Office Tools.

Google Workspace, Microsoft Office, advanced typing.
